Quick Note: Condensed Matter Physics is not included in the Core Part A syllabus.

1. Lead is superconducting below 7 K and has a critical magnetic field 800×10^{-4} tesla close to 0 K. At 2 K the critical current that flows through a long lead wire of radius 5 mm is closest to (February 15, 2022)

3. A tight binding model of electrons in one dimension has the dispersion relation $\varepsilon(k)=-2t(1-\cos ka)$, where t>0, a is the lattice constant and $\frac{-\pi}{a}< k<\frac{\pi}{a}$. Which of the following figures best represents the density of states over the range $\frac{\pi}{2a}\leq k<\frac{\pi}{a}$? (November 19, 2020)
